- Spi
- Energy Safety Canada
- Prairie Sky Recovery Centre Inc.
- University of Fredericton Canada
- Lead
- STARS
- Saskatoon Police Service
INJURIES ARE COSTLY
According to statistics released by the Saskatchewan Workers Compensation Board, there were 29,140 accepted workplace injury claims in Saskatchewan during 2018, including 19 fatalities. Each of these incidents incur huge costs for businesses in Saskatchewan. With each passing year, the average cost associated with each injury and fatality increases. Saskatchewan businesses have been preventing more injuries than ever before by making investments into health and safety.

More importantly, the psychological and physical costs that these workers and their families sustain are reason enough to ensure that your work environment is as safe as it can possibly be. It is for this reason that the Saskatchewan Safety Council created the Industrial Safety Seminar.

WHAT IS THE INDUSTRIAL SAFETY SEMINAR?
Industry has known for many years that safety doesn’t cost - it pays! Started by a group of concerned individuals, the aim of the conference was, and is, to provide safety professionals in Saskatchewan a forum to discuss areas of common concern.

Since 1974, the event has grown to become Saskatchewan’s premier safety show and one of the largest events of its type in western Canada. The 47th Annual Industrial Safety Seminar will feature 29 educational sessions with speakers from Saskatchewan, Canada and the United States. It will also feature one of the largest displays of safety equipment and services in western Canada, with 115 display booths.

The 47th Annual Industrial Safety Seminar will take place on February 3 - 5, 2020 at The World Trade Centre at Prairieland Park, Saskatoon, Saskatchewan.

WHO WILL ATTEND THE INDUSTRIAL SAFETY SEMINAR?
The Industrial Safety Seminar, although aimed primarily at business and industry, is open to anyone interested in safety. Average attendance in the past three years was over 700 delegates representing Safety Managers and Professionals, Occupational Health and Safety Committee Members, Supervisors and interested small businesses and individuals. Delegates represent a large cross section of Saskatchewan industries including mining, utilities, oil & gas and construction, Provincial and Federal regulatory agencies, crown corporations and private companies.

The Industrial Safety Seminar is an excellent opportunity for new or experienced safety practitioners to attend professional development sessions with experts on a variety of current safety related topics. It is also an opportunity for all those interested in safety to network with like-minded people, while expanding their safety knowledge.

Eldeen Pozniak - Making Safety Stick

Safety messages, how can we make them stick? Why can everyone remember that urban legend, a rumor, or a story told over a couple of drinks, but walk out of a safety meeting and not remember the topics discussed that day?

As Safety Professionals we communicate in a variety of ways, and at times struggle with why our communications did not get attention, resonate, or get the message across like we expected.

This session reviews the concept of “stickiness” in safety messaging and will provide you with communication tools to ensure your information “sticks”, is understood, remembered, and changes something.

Eldeen Pozniak is a Canadian Registered Safety Professional (CRSP), Certified Health and Safety Consultant (CHSC), Certified Health and Safety Management System Auditor (CHSMSA), Fellow of the International Institute of Risk and Safety Management (FIIRSM) and a Chartered Member of the Institute of Occupational Safety and Health in the UK (CMIOSH).

She has a diverse safety designation and educational background. Eldeen is committed to a Safer World of Work. Her commitment is demonstrated by her 25 plus years of experience and involvement as an advisor and consultant to various industry sectors, government organizations, businesses, and as lecturer at educational institutions. Her dedication is also shown through her involvement and volunteer positions in safety and health related associations. Eldeen is the Past President of the Canadian Society of Safety Engineering (CSSE), past president of the International Network of Safety and Health Professional Organizations (INSHPO), and is the current standards practice chair of the International Practice Specialty of the American Society of Safety Professionals (ASSP).

Due to her commitment and professionalism, she has received many awards and recognitions. Eldeen was honored by the American Society of Safety Professionals in their publication – 100 Women making a difference in the safety, health and environment profession. She was inducted into the Saskatchewan Safety Hall of Fame, has been presented with both the Saskatchewan and Canadian Safety Professional of the year award (in different years), and she was recognized and invited to have tea with the queen at Buckingham palace for her contributions to health and safety globally in 2017.

For these reasons and more, Eldeen is sought after to share her passion and knowledge as an International Key Note and Sessional Speaker.
Randy Ambrosie - For Every Action There Must be an Opposite and Greater Reaction

Sir Issac Newtons 3rd Law of Physics – for every action there is an equal and opposite reaction. Randy’s Law of Business for the 21st Century is “For Every Action There Must Be An Opposite and Greater Reaction”.

Randy speaks about ongoing change and innovation in business and how it parallels change and innovation in sports. He speaks about how leadership must recognize and embrace change and innovation to allow the organization to remain relevant. “In the new business world one must give the customer what they want and need and then deliver it in a way that the customer wants and needs it.”

Randy Ambrosie won the 81st Grey Cup in 1993 as an offensive lineman with the Edmonton Eskimos. He played for the Toronto Argonauts and Calgary Stampeders during a CFL career that spanned nine seasons. After he underwent his fourth knee surgery during the offseason, Randy retired from professional football.

It was the Calgary Stampeders, who made him the second overall pick in the 1985 CFL Draft out of the University of Manitoba, where he earned All-Canadian honors and a Bachelor of Commerce degree. He studied executive finance at the Columbia University School of Executive Education, management at the University of Michigan Business School’s Executive Education Centre, and leadership development at the Wharton School of Business.

In 2003, Randy joined HSBC Canada Securities and HSBC Brokerage USA, where he led sales and growth strategies.

In 2004 Randy joined AGF Funds Inc. as their head of sales and marketing. He went on to become the President of AGF Funds in 2007. His leadership brought several changes including new fund managers and the launch of new products. During his tenure AGF became the fastest growing independent fund company in Canada.

Ambrosie served as CEO of Accretive 360 Inc. from 2010 to 2012. In 2012, Randy joined MacDougall, MacDougall and MacTier, where he helped re-energize Canada’s oldest investment company as its President and Chief Executive Officer. The firm was successfully sold.

In July 2017, Grey Cup Champion and business leader Randy Ambrosie became the new Commissioner of the Canadian Football League. The 54-year-old Winnipeg native’s appointment was approved in a special meeting of the league’s Board of Governors.
Dr. John Izzo - The Secrets of Highly Engaging Workplaces and Leaders

Organizations with high levels of employee engagement are significantly more profitable, have much higher customer loyalty, and a better reputation with customers than those with moderate engagement. In fact, the average HIGHLY engaged team member can be up to 40% more productive than a disengaged performer.

But what are the secrets to highly engaged teams and highly engaged companies? Why do some leaders consistently create highly engaged associates? In this session John shares four key ways to creating high engagement teams and shows why some leaders are consistently able to get high levels of commitment from people.

Dr. John Izzo helps companies maximize their potential from the ground up. For over 20 years, Dr. Izzo has worked with thousands of leaders around the world, on employee-engagement strategies and brand transformations. He has been a pioneer in employee engagement, leading change, shifting employee and consumer values and corporate social responsibility, and is known for his hard-hitting practical content, his inspirational storytelling and the lasting impact he has on organizations.

Dr. Izzo has advised some of the best companies in the world on activating purpose including DuPont, TELUS, Manulife, McDonald’s, Tim Horton’s, SAPA, RBC, Lockheed Martin, Qantas Airlines, Humana, Microsoft and the Mayo Clinic.

He is the bestselling author of seven books, including the international bestsellers Awakening Corporate Soul, Values Shift, The Five Secrets You Must Discover Before You Die, Stepping Up, and The Five Thieves of Happiness. His latest book, The Purpose Revolution, was published in 2018.

Frequently profiled in the media, Dr. Izzo has been profiled by the likes of Fast Company, PBS, CBC, The Wall Street Journal, CNN, and Inc. magazine.

Dr. Izzo is an adjunct professor at the University of British Columbia, where he is a co-founder of The Men’s Initiative, which is dedicated to creating a more equitable, compassionate, and sustainable world through enhancing the well-being and integrity of men. He also serves on the Advisory Board of Sustainable Brands.
Bob Gray - Be Head Strong...Safety Gears are Between Your Ears

In the safety industry a trained memory is an asset second to none, strict adherence to procedures is paramount, a forgotten step or out of place procedure can be disastrous. How do we keep our brains sharp?

Think of this highly interactive, humorous presentation as that instruction manual that has long been missing. With it you will learn to take advantage of the #1 option so often ignored, the incredible power of your memory.

Bob will also share a powerful system to help overcome the #1 Recall system both socially and professionally…..remembering names! He reveals a wonderful method to easily store into memory the names of new friends and business acquaintances...a fun system...and it works!

Bob Gray, motivational keynote speaker and memory expert, discovered his first memory technique when he was seven. He was given a magic book that showed him how to remember a twenty-item list. Shortly thereafter he was called on to ‘do the memory trick’ at family parties and gatherings.

Bob immigrated to Canada from England. At the time he was working as an entertainer, entertaining under the stage name of ‘Backwards Bob the Memory Man’. Bob demonstrated the unique abilities that have netted him a place in the Guinness Book of World Records, appearances on Ripley’s Believe It or Not, The Steve Harvey Show, The NBC Today Show, BBC, CBC, and many more. After arriving in Canada, Bob traveled North America, appearing in Comedy Clubs, Colleges and Universities, where he demonstrated his unique abilities.

Bob was awarded the prestigious Certified Speaking Professional (CSP) designation, the highest designation in the world of Professional Speaking. Based on rigorous criteria, the CSP designation has been awarded by the International Federation for Professional Speakers to less than 10% of Professional Speakers worldwide. In December 2006 Bob was inducted into the Canadian Speaker Hall of Fame.

When Bob decided to take a break from the road, he entered the business world. Starting in the Fitness industry, he quickly found that by adapting the memory techniques he had been studying, he was able to move ahead in his career faster than anyone expected. Bob taught his memory techniques to his own sales staff, with amanzing results. Bob was invited to share his techniques at a national fitness convention. Afterwards, there was a demand for him to teach his system to other companies and organizations. From then on, there was no looking back. Bob was again doing what he loved. He was performing. Only this time, he also had the satisfaction of knowing that he was educating his audience as much as – if not more than – entertaining them.
Session and Speaker Highlights

Monday, February 3rd

Session Block A: 1:30 pm - 2:45 pm

Reducing Risk for Frontline Workers Through Design and Innovation
Jon Theobald, City of Saskatoon

Traffic control is constantly changing as new technologies become available, this entails that industry should never become complacent with current practices and should be consistently evaluating ourselves, our practices, our equipment and traffic devices.

This presentation will speak to implantation of pilot trucks during city projects, and using different traffic control devices for special projects and events, and how the City of Saskatoon decided to change their design completely. Which lead to having the police and the government safety OHS exemption.

Jon Theobald has been a Superintendent at the City of Saskatoon for 4.5 years, his team is in charge traffic control, manufacturing and install/repair of street signs, and painting the road markings in the City of Saskatoon.

Originally from Leicester, United Kingdom, Jon worked in casinos for about 11 years. While in the casino industry he had the opportunity to travel with the royal Caribbean cruise lines. Onboard a ship everyone has two jobs, your main one is the job you’re hired for, and the second one is emergency training. This training is strictly enforced. From firefighting to life boat drills, Jon’s role was a lifeboat commander.

Jon has been in Canada for almost 20 years, and happy to say he is a Canadian. Jon has had various roles since being in Canada, but safety, best practice, continued training and process improvement, has always been at the forefront of his work habits.

The Score: Supervisor Competency 1 - Gravity 0
Tom Hamann, Saskatchewan Safety Council

Competent supervision is a requirement on all job sites. Where fall protection is concerned, do you know if your company supervisors can pass the competency bar?

If we generally have competent supervision, why then are there so many falls in Saskatchewan workplaces? Why are the trends not going down?

We have all heard before; “If you are unsure, ask your supervisor”. Do your supervisors have the knowledge required to answer tough questions? Can your supervisors recognize inadequacies in current fall protection methods? Do they know if your workers are “doing it right”? Ultimately, what does a person need to demonstrate to be considered competent when supervising activities requiring fall protection?

This enlightening and thought-provoking session will provide you with the answers to some of these questions. It’s about time that we stop losing to gravity.
Violence Threat Risk Assessment (VTRA)
Pat Rivard
North American Centre For Threat Assessment and Trauma Response

In this session you will learn how VTRA identifies individuals and groups who are moving toward committing serious violence. It decreases the number of community threats and the level of violence.

Pat Rivard is a National Trainer with the North American Center for Threat Assessment and Trauma Response (NACTATR). Pat recently transitioned from an 18-year career in Education where he served students and communities as a teacher, principal and nine years in senior leadership in two school divisions in Alberta. Pat is currently the training lead in North America’s largest urban Violence Threat Risk Assessment (VTRA) initiative.

Beyond his years of experience in Education, Pat is uniquely qualified to comprehend the complexities of multiagency collaboration being initially trained as a Social Worker.

Pat is an Alberta born Francophone whose entire career has been as a professional in the English sector. As such, he is NACTATR’s only bilingual trainer who has been training Level One and Two VTRA in both languages for the past three years. Recently, Pat has taken a lead with Francophone leaders from the New Brunswick Government for the development of enhanced VTRA Protocols and the streamlining of training and practice for both Anglophone and Francophone sectors.

The Invisible Disability:
Practical Strategies to Keep Staff and Visitors with Food Sensitivities Safe on the Job
Shelley Case, RD

Shelley will raise awareness about workplace health and food safety issues such as food sensitivities including food allergies, celiac/gluten intolerance.

The growing number of individuals with a food allergy or sensitivity impacts every work environment. Whether it be a life-threatening reaction to peanuts or severe gluten intolerance due to celiac disease, everyone needs to work together to create a safe workplace for staff and visitors.
This session will:
1. Provide an overview of food allergies and sensitivities
2. Practical strategies to prevent cross contact in the lunchroom and work areas
3. How to provide accommodations at meetings, conferences and other events in the workplace and at other locations outside the workplace

Shelley Case is a leading international expert on the gluten-free diet, she is a registered dietitian, author, speaker and consultant with more than 35 years’ experience. Shelley is a member of the Medical Advisory Board of the Celiac Disease Foundation and the Canadian Celiac Association’s Professional Advisory Council.

Shelley is a sought-after media source, conducting hundreds of radio, television, newspaper and magazine interviews throughout North America such as the NBC Today Show, CNN, CBC, CTV, Global TV, Wall Street Journal, WebMD, National Post, Globe and Mail, Food Business News, Chatelaine and Canadian Living.

Shelley graduated with a degree in Nutrition and Dietetics from the University of Saskatchewan and completed the dietetic internship at the Health Sciences Centre in Winnipeg, Manitoba. Highlights of Shelley’s career include: Acting Director and Teaching Dietitian at the Southern Saskatchewan Metabolic and Diabetes Education Centre in the Regina General Hospital; and Marketing Dietitian and Outpatient Dietitian for Nutrition and Food Services in the Regina Health District. In 1997, she established Case Nutrition Consulting, Inc., a business specializing in celiac disease, food allergies and intolerances.

In addition to her food and nutrition expertise, Shelley lives with celiac disease and food allergies, thus understands the challenges of following a strict special diet for life.

Eyes Wide Shut: Managing Workplace Fatigue in Canada

Mike Harnett

This session will review the findings from a CSA research report on workplace fatigue in Canada, a project that was led by the speaker.

How are organizations addressing fatigue? What are the unique challenges amongst municipalities, first responders and construction? How are healthcare workers coping? What about those who work north of 60? Are we safe on the roads with tired truckers? Are regulations the answer, or do they just create more questions? Find out where the gaps are, who’s leading the way and where your organization stands in the pack.

Mike Harnett is President of Solaris Fatigue Management, a consulting firm that specializes in optimizing worker health, safety and performance. She has over 25 years of experience consulting with various government agencies including NASA, the Canadian Standards Association, and Rail Associations in both the US and Canada. Most recently, she was the Project Manager for the completion of a 2019 Review of Workplace Fatigue in Canada for the Canadian Standards Association.

With a background in human factors and sleep neurobiology, Mike is recognized for her ability to take complex subjects and deliver their content in a simplified and innovative manner for all to understand. An award-winning speaker, she is an internationally sought-after presenter and educator.
Repealing and Replacing Environment and Climate Change Canada’s Environmental Emergency Regulations
Christina Firth, Environment and Climate Change Canada

On August 24th 2019, the Environmental Emergency (E2) Regulations 2019 came in to force under the authorities of Section 200 of CEPA. On that day, new regulations repealed and replaced the current E2 Regulations.

This session will provide an overview of the Environmental Emergency Regulations, 2019. It will serve as an opportunity to spread awareness about the new requirements to the regulated community and provide insight into the regulatory development process.

Christina Firth is an employee of Environment and Climate Change Canada. She works for the Environmental Emergencies Program out of Edmonton, Alberta. The Environmental Emergencies Program protects Canadians and their environment from the effects of environmental emergencies through the provision of science-based expert advice and regulations. In delivering its responsibilities, the program works in close partnership with other federal government departments, other levels of government, the private sector and international organizations. Christina is an engineering graduate from the University of Alberta and has worked for the Federal Government since 2006.

A Journey of Workplace Substance Abuse and Discussion of Processes to Manage
Scott Heil, 2BSure SAP Services

Join a fun and engaging discussion about the roots of workplace alcohol and drug testing, goals and influences on current practices. Learn about what a qualified Substance Abuse Professional (SAP) is and does. Analyze strengths and potential gaps of processes used for managing workplace substance abuse. Consider future directions aimed at protecting workplace health and safety and “pro-actively preventing” workplace injury and fatality.

Gain more insight into the commonly misunderstood or undervalued area of substance abuse and the workplace. Conceptualize how you or your company can further contribute to the collective safety of your industry.

Scott Heil B.A. Psych, ICADC, CCAC, SAE, DOT SAP (U.S.) is a Canadian and Internationally certified alcohol and drug counsellor with over 20 years experience in residential inpatient, outpatient, hospital and community addiction settings.

In private practice, Scott and the team at 2BSure SAP Services are specifically trained and specialize in providing safety-sensitive employee assessments and recommendations for Return to Duty processes and providing employers and supervisors with Reasonable Suspicion/Fitness for Duty training. Scott is recognized as a Substance Abuse Expert in Canada and as a qualified Substance Abuse Professional through the U.S. Dept of Transportation.
Asbestos for Dummies
Tricia Gibney and Mike Pirot

The Dummies brand has patented taking complex concepts and making them easy to understand. This presentation will help everyone become more knowledgeable in the realm of asbestos and more confident in applying their new-found knowledge.

In 2018, asbestos-related deaths were identified by Saskatchewan Worker’s Compensation as being responsible for 23% of the overall workplace fatalities between 2009 and 2018. These numbers have seen a steady climb in recent years as opposed to the drop in numbers that would be expected.

We will cover the very basics of what asbestos is, how it affects the human body, common uses of asbestos and some of the not-so-common places you will find asbestos. We will discuss the idea that structures and manufactured items produced after asbestos was prohibited no longer contain asbestos. We will approach some of the items to look for on Phase 1 and Phase 2 environmental assessment reports and what to ask for if you are initiating your own reports. The next item of knowledge will be on managing asbestos once it has been identified and how to structure a remediation project complete with disposal measures. From the basics provided in this session we will discuss items regarding asbestos exposure, what can someone do who thinks they were exposed and then the employer’s responsibilities after exposure occurs. Finally, we will provide participants with resources to dig even deeper to help ensure the safety of their families and co-workers when dealing with asbestos.

Tricia Gibney holds an Occupational Health and Safety Certificate from the U of A, a diploma in Civil Engineering from SIAST Palliser, received her Gold Seal status with the Canadian Construction Association, CRSP and Applied Science Technologist designations.

Tricia has been in the role of HSE Supervisor with PCL Saskatoon District since September of 2008. Her current job duties include assisting with the implementation, monitoring and improvement of the PCL Health, Safety and Environment program on construction sites.

Tricia is also a very proud member of the ISS Steering Committee and is a Regional Screening Centre chair for BCRSP. Prior to joining the PCL safety team, she worked as an Occupational Safety Administrator with the City of Saskatoon’s Water and Wastewater Treatment Branch, also in engineering capacities within water and sewer construction with the CoS. Tricia worked at a uranium mine during phase one of construction, and as a lab technician at an asphalt refinery.

In 2018, Tricia received the Saskatchewan Safety Council Safety Professional of the Year award.

Mike Pirot, BA, NCSO, CRSP, has over twenty years of experience in the health, safety, and emergency response industry.

Mike began his career as a primary care paramedic and firefighter for the cities of North Battleford and Medicine Hat, before transitioning to construction and worker safety in the province of Saskatchewan. Mike coordinated on-site safety protocols and implementation at PCL Construction before moving to Facilities Management at the University of Saskatchewan, where he variously led contractor relations, maintenance safety, construction safety, and the Universities asbestos removal program.
Strengths in Leadership
Jolene Watson

In this session, Jolene will cover the following topics:

• Understanding behavioral adaption and stress triggers
• Identifying career niches within personality types
• Introducing change effectively within your team

Join Jolene in this interactive and upbeat presentation that will help you build your leadership skills.

Jolene Watson is the President of Clarity Coaching & Development, personality expert and professional speaker across Canada. She is also a facilitator at the Praxis School of Entrepreneurship, Edwards School of Business & Saskatchewan Polytechnic.

She became certified as a Myers-Briggs Practitioner through Psychometrics Canada Ltd. where she graduated with a 99% average (she is obviously really passionate about psychology). Jolene was honored this year be a finalist for the 2019 Chamber of Commerce SABEX awards, Better Business Bureau Torch Award for Ethics, NSBA Business builder Awards and the Women Entrepreneur Achievement Awards.

Jolene offers services including but not limited to: personality profiling, team building workshops and career coaching. Her areas of expertise are: stress management, customer service, presentation skills and networking etiquette.

Jolene was born in Saskatchewan and grew up on a farm near Saskatoon; she looks forward to continuing to expand her business across Canada this upcoming year and truly loves being an entrepreneur!

Tuesday, February 4
CSSE Dinner
Cocktail Reception 5:30 pm
Dinner and Entertainment to follow

Entertainment: Ty Penny

Tickets available online
www.csse.org/site/chapters/northern-light/events
Workplace Vitality
Dr. Willow Johnson, Lead

According to Morneau Shepell, in 2015 the cost of absenteeism to the Canadian economy was $16.6 billion while the cost of presenteeism was $124.5 billion. These numbers are staggering and although there is not one main reason for these stats, businesses need to understand that the mental and physical wellbeing of their team needs to become a priority. Making this a priority will turn into workplace wellness into a strategic business benefit if implemented correctly.

Many organizations have a well-rounded health benefits program, many offer a discretionary health spending account or a discounted gym membership. Workplace wellbeing needs to be more than this in order to gain the strategic advantage it can offer.

During this session Dr. Willow Johnson, Naturopathic Doctor, will educate on what she refers to as the foundations of health - proper diet and digestion, stress management, sleep, and movement. Come get educated and inspired on how to begin building out these foundations, for better quality of life for you and your team.

Lead is Saskatoon’s premiere Integrated Health and Wellness facility. Home to over 80 weekly Pilates-based fitness classes that make you sweat, strong, stretch and move, Lead has your body covered whether you are new to movement and exercise or are looking to take your fitness to the next level. Their clinic offers Chiropractic, Naturopathic Medicine, Massage Therapy, Physiotherapy, Clinical Counselling, Reflexology + BodyTalk and Mental Health Services.

Their goal is to educate, inspire and move the clients and patients that walk through their doors everyday to become better versions of themselves. They become your personal wellness team and with online booking, direct billing and tons of free parking they help to make your life more efficient.

Community Safety Seminar
2020 Saskatoon

Visit our website for more information
www.sasksafety.org

The Community Safety Seminar focuses on building awareness and delivering safety information relevant to those serving or working within their communities.

This event will gather together presenters, thought leaders, businesses, organizations, and like-minded individuals to learn about, discuss, and strategize ways in which participants can Work Together to Achieve a Safe Saskatchewan.
Session and Speaker Highlights
Tuesday, February 4th

**Session Block C: 10:45 am - 12:00 Noon**

---

**Welding Respiratory Hazards: Health Effects, Exposure Controls and PPE**  
Brad Young, 3M

This session focuses on the primary respiratory hazards faced by the welding trade. Discussion around the known and suspected health effects of certain welding fume exposures, fume generation from specific welding processes, worker exposure controls, and suitable respiratory protection.

* Brad Young is a Senior Account Manager and Safety Specialist with 3M Canada’s Personal Safety Division.

* Brad has been with 3M in his current role for over 11 years and has been in the personal protective equipment business for almost 20 years. He spends his time providing PPE solutions to Saskatchewan industry and supports the industry with the required PPE training. Brad is also a member of the ISS steering committee.

* Born and raised in Saskatchewan, Brad and his family live in Regina.

---

**Life Saving Rules and the Future of Serious Injury and Fatality (SIF)**  
Robert Waterhouse, Energy Safety Canada

Serious Injury Fatality (SIF) program focuses on the identification and reporting of potentially serious incidents (PSI).

The session will discuss the value of PSI’s, how they are different from other incidents, connections to other initiatives and strategies like Life Saving Rules and the future of serious injury and fatality (SIF) prevention.

* Robert Waterhouse is a certified industrial hygienist with over 20 years of experience in consulting, corporate and safety association work environments. He is a senior staff advisor in the Industry Development department at Energy Safety Canada, the safety association for Canada’s oil and gas industry.

* Robert is a passionate and technically proficient professional who believes the role of health and safety professionals is to set the business up for success in the prevention of injuries and illnesses.

---

**Tradeshow Hours:**  
Monday, February 4  
7:45 am - 4:30 pm  
Tuesday, February 5  
7:45 am - 3:15 pm
STARS Has Been Dispatched. Now What?
Cary Serviss, STARS

Due to its complete versatility, STARS is able to bring training to health care workers who may be faced with barriers of distance and the inability to leave the community at regular intervals to train.

The Landing Zone Training program facilitates the exchange of information between STARS and the organizations we serve, ensuring the most effective patient care and transport possible.

Topics covered during this training session include:
- How to access STARS
- Landing zone preparation and helicopter safety
- Preparing a patient for air medical transport

The program is designed specifically for emergency and medical personnel including: Paramedics and Emergency Medical Technicians, Doctors, Nurses, Fire Departments, Police Departments, RCMP, Park Rangers, Search and Rescue Technicians, Industry Field Workers.

*Cary Serviss is the STARS Community Education Leader based in Saskatoon.*

---

Bad Mood, Rude or Crude - Wrong Attitude!
Shifting Behaviours to Reflect the Safety Professional You Are or Want to Be
Val Foulds MacLeod, Noble Construction Corp

If you question how your behavior impacts others’ perceptions of you, this is the session for you!

As Health and Safety Professionals, a significant part of our role is influencing the behavior of others toward positive outcomes. Because we are expected to demonstrate professionalism, our behavior is under constant scrutiny by varying levels of leadership, employees, potential clients, peers and colleagues.

We work in diverse locations - in the field on worksites, in open cubicles, in boardrooms and classrooms and perhaps even at a formal dining table. We may be placed in settings and situations where we are unsure how to behave or act. While our knowledge and skills may be well-developed, our actions may leave others feeling cold. We may be unaware that we behave in a way that has a negative impact on how others perceive our capabilities or professionalism to the extent it may affect the ability to keep our job or advance in our career.

This interactive presentation will provide individual evaluations of our behaviours, mannerisms and personal habits, a “brush-up” on basic professional manners, and conclude with recommendations on creating change to positively affect how others “see us.”

*Val Foulds MacLeod is an OHS Consultant for the past 20 years, Val has coached both management and employee groups in ways to increase their professional and personnel successes. She possesses the strong belief that consistent and positive behaviour of the OHS professional impacts the likelihood of positive outcomes.*
Addictions in the Workplace
Jacqueline Hoffman, Praire Sky Recovery

In our current climate of addictions, employers, HR and policy makers need education to be able to identify behaviours common to addiction so they are able to step back and assess without judgement.

Frequently both the employer and the employee are trying to function in an unfunctional situation. Knowing how to approach the topic, what resources are available to them and where policy comes in is crucial to navigating appropriately.

Prairie Sky Recovery Centre has been helping employers and families for over a decade to determine how to help those struggling with addiction in a respectful, compassionate manner.

The discussion will include what addictions is, how it impacts homes and work environments, how best to handle disclosure and what can be done to help.

Jacqueline Hoffman is the CEO of Prairie Sky Recovery Centre- the only private addictions recovery centre in Saskatchewan.

Jacqueline joined her mother, founder Ardyth Wilson, in her mission of providing a safe, serene environment and in-depth programs to help those suffering from addictions and emotional health issues. Jacqueline’s experience with addictions comes from the lived experience of having a parent in recovery.

In 2018, Jacqueline was named one of Future 40 winners, awarded to people under age 40 who are making Saskatchewan’s future brighter. Her advocacy for changing the landscape of addictions treatment comes from a place of genuine understanding and wanting to break barriers and stigma associate with addictions. Jacqueline is a married mother of three, a writer and loves to travel.
In 2017, the CNESST opened and approved 4,500 work accident cases related to falls of more than 3 meters, and this number is for Quebec only.

To reduce the number of accidents at work, to ensure that workers return home safe and sound at the end of each workday, and to increase the productivity of Canadian companies of all sectors of activity, SPI Health and Safety strives each day to raise awareness and instill the importance of prevention in the work environment.

Knowing that since 2004, the economic costs of injuries in Canada have grown by 35%, SPI has developed several awareness tools, such as its conferences.

Fall Protection Standards covers the normative changes of 2019, in particular the major challenges in effect:

- The standard CSA Z259.11-17 on Personal Energy Absorbers and Lanyards
- The standard CSA Z59.2.2-17 on Self-Retracting Lifelines including the entire reclassification of devices and the addition of the end of the roof slope

This upgrade of current applications will allow you to learn the adjustment necessary to comply with Canadian legislative requirements.

Bruce Davis holds a “Train-the-Trainer” diploma from TELUQ as well as Competent Trainer and Qualified Inspector certificates from Sulowski Fall Protection Inc. (in collaboration with CSA). Also, he has successfully completed many training courses from several fall protection equipment manufacturers.

Bruce has over 26 years of experience in occupational health and safety. Bruce has many accomplishments in OHS training and expertise and for many years he has been involved in the implementation of various expertise and training services tailored to the needs and realities of the customers of SPI Health and Safety.
Creating an Indigenous Engagement Plan for Safety
Toby Desnomie, SFNSA

Effective negotiations with Indigenous communities require your team to have a deep understanding of the community with which you hope to work with. This understanding of the community will assist setting safety standards, as it will give insight into some issues that may be sticking points for the community. If you understand why the community has an issue, then it will help you find solutions that are amenable to both your organization and the community.

Raise awareness of best practices for strengthening relationships during the negotiation process.

Toby Desnomie has been working for First Nations communities as a technician, manager and coordinator for over 20 years. Working alongside many wonderful mentors, he has had a unique advantage to advocate on behalf of workers in every opportunity that was presented to him. Toby’s education and career are a genuine reflection of his journey towards building awareness and safe communities.

Toby worked as a National Construction Safety Officer Instructor with the Saskatchewan Construction Safety Association, and that allowed him to see first-hand what safety can do to help organizations thrive.

Addressing Addictions and Substance Abuse Disorders in the Workplace
Anthony Nadon, Saskatoon Police Service

Approximately 1-in-25 Canadians over the age of fourteen have an addiction or substance abuse disorder (ASAD). This means that most large businesses in Canada will experience problems related to ASADs and should have plans in place for how to address them.

In Canada, the estimated annual cost of productivity lost to addiction and drug abuse disorders (ASADs) is $11.8 billion. In addition to the cost of reduced productivity of employees who develop ASADs, there are other costs such as absenteeism, presenteeism, turnover, disciplinary actions, and lower workplace morale.

Having a workplace Prevention through Education and Communication program/policy is essential. Making a plan to educate your employees regarding the following areas related to addiction and substance abuse disorders (ASADs) will assist in the success of your business for now and the future. How are you preventing and addressing the issue? Tony Nadon with almost 3 decades of Emergency Services experience will share his experiences and knowledge through education and laughter.

Tony is a Saskatoon raised boy that has over 28 years of Emergency Services experience in Saskatoon. Tony started out as a Paramedic in the early '90’s and shifted gears into policing with the Saskatoon Police Service in 1997 where he currently holds the rank of Staff Sergeant and is the Watch Commander for 60 front line patrol members while on duty.

Tony has adapted to the life of shift-work and how to manage difficult hours of work and the stressors that come with it. Within his career at the police service he served as a SWAT member for 12 of these years and has been involved in numerous high risk and stressful occupational hazardous calls which he will relate his experiences to fatigue and sleepless nights.
With the recent new cannabis laws, the fentanyl crisis, and cyber access to any drug out there, Tony will educate and share his experiences while giving you knowledge through laughter while identifying these real-world concerns and how to address them.

**Understanding Equipment Operator Competency**  
Natalya Uchacz, Heavy Construction Safety Association of Saskatchewan

In this session, you will gain an understanding for the types of PME and general duties of an operator. You will learn how to do a proper site evaluation and identifying hazards related to operation of PME on site.

Occupational Health and Safety Regulations require employers to ensure that only trained and competent operators are permitted to operate powered mobile equipment.

Natalya Uchacz is a Safety Program Consultant for the Heavy Construction Safety Association of Saskatchewan. In her role she promotes the arts and sciences of safety to the heavy civil industry in Saskatchewan. She works directly with company representatives to guide them as they establish and maintain a safe workplace and reduce injury rates.

Natalya has worked in the construction industry for 16 years as a machine operator and supervisor. She has her NCSO and Certificate in Occupational Health and Safety from the University of New Brunswick, as well as her CRSP Designation.

**I’m Stressed: Now What?**  
Stacey Alexandre

It’s no secret that stress is impacting our workplace environment, but how can organizations effectively tackle it? The key to solving this mounting problem starts with learning how to identify and control your own emotions, and to effectively engage others who are emotionally heightened.

Using a unique bio-feedback based approach, Stacey will offer practical strategies to navigate common workplace stress scenarios and create a positive and healthy working environment.

Stacey Alexandre, B.Sc.Kin, R.T., a Mental Performance Consultant with over a decade of hands on experience assisting individuals and organizations with the everyday challenges brought on by stress. Stacey promotes a unique approach for addressing emotional and behavioural issues, and believes engaging both the employer and employee is key in dealing with stress in the workplace.

Local organizations that have benefited from his workshops and presentations include the Saskatoon Construction Association, Parkland Ambulance Care, Prince Albert Raiders, Square One: Saskatchewan’s Centre for Entrepreneurship, and various local Rehabilitation Clinics.

With his combined knowledge of bio-feedback techniques, emotional regulation and behavioural engagement skills, Stacey will help you identify and master your own stress response and learn how to engage employees and members of the public who are emotionally heightened.
Volunteer Safety
Mike Pirot, Harness Safety

Many communities, groups, companies, and assorted associations rely on volunteers to help keep things running and moving forward. From caring for our elderly or disabled, fundraising, to building a playground, volunteers are an important part of how society functions.

Our focus is to bring to light the responsibilities held by any organization that works with volunteers. We will discuss the responsibilities with regard to legislation, training, emergency measures, and morally to protect these workers.

Mike Pirot, BA, NCSO, CRSP, has over twenty years of experience in the health, safety, and emergency response industry.

Mike began his career as a primary care paramedic and firefighter for the cities of North Battleford and Medicine Hat, before transitioning to construction and worker safety in the province of Saskatchewan. Mike coordinated on-site safety protocols and implementation at PCL Construction before moving to Facilities Management at the University of Saskatchewan, where he variously led contractor relations, maintenance safety, construction safety, and the University’s asbestos removal program.

In 2017, Mike established his own health and safety company in Saskatoon, Harness Safety. Mike’s philosophy is worker-centered and focuses on mitigating risk without unduly disrupting work processes. He has worked with clients from municipalities to public institutions, and from small businesses to large firms, to create effective, sensible HSE planning that ensures worker safety and productivity can go hand in hand.

Navigating Academic and Professional Development Opportunities in Occupational Health and Safety
Collin Pullar and Nolan Horbach

With an overwhelming amount of information readily available, sourcing and selecting professional development options can be confusing and frustrating enough let alone understanding what makes the most sense for you and where you want to be.

In this session, you will learn more about what Saskatchewan Polytechnic and the Saskatchewan Construction Safety Association (SCSA) have to offer including the recently announced articulate reciprocal recognition of prior learning between Saskatchewan Polytechnic’s Occupational Health and Safety (OHS) Certificate and the SCSA’s National Construction Safety Officer (NCSO) courses as an avenue for further professional development of health and safety practitioners.
With the goal of supporting prospective and experienced students and professionals alike, both organizations aim to enhance the awareness of academic and professional development opportunities available.

Collin Pullar – President, Saskatchewan Construction Safety Association (SCSA). Collin’s management and executive experience includes leading public and private sector teams across Western Canada in the areas of labour market and economic development. Collin has been an industry advisor in the development of Saskatchewan Polytechnic’s Bachelor of Science in Construction Management degree program and has been a guest speaker for a variety of groups including graduate schools and industry sector conferences. Collin holds a Masters’ Certificate in Public Management and an MBA.

Nolan Horbach – Program Head, Occupational Health and Safety, Saskatchewan Polytechnic. As Program Head of the Occupational Health and Safety Certificate Program, Nolan has supported the program through various revisions and accreditation processes with the goal of contributing to and ensuring the success of students and the Occupational Health and Safety profession. Nolan’s involvement within applied research and other areas within Saskatchewan Polytechnic and the University of Saskatchewan has opened the door to a whole new level of opportunity for the Occupational Health and Safety program within the 21st century of learning. Nolan has an Occupational Health and Safety Certificate.

**ROI in Safety Initiatives**
Cathy Glasser, Glasser Safety Services

Like all programs at the facility, return on investment for those programs is just good business, and should be expected: safety should be no different.

Maybe you feel safety is just the cost of doing business; but if done correctly, that’s not actually the case. Or maybe you feel WCB fees are just the cost of doing business, to some extent that is true, but only to a 40% discount on the base rate of your code; any more than that is taking money from your bottom line and giving it away.

This presentation will give the attendee some concrete ideas to take back to their workplace and get better return on investment immediately.

Cathy Glasser has 15 years of combined safety experience at both an individual company and as a safety advisor at a safety association, working with many companies.

Cathy was educated at the University of Fredericton, certified in health, safety & environmental processes, as well as specializing in ergonomic systems. Cathy works with management to analyze where their companies are at in the safety spectrum, where the company wants to be, and develop an action plan to update or create a safety management system, that will, once implemented pass a COR certification. She has helped supervisors understand their legal obligations and developing skills to get the most out of their teams; safe production that meets a quality standard.

Cathy specializes in employee involvement to create buy-in to increase the safety culture throughout the facility.

Cathy exhibits a passion and dedication to making Saskatchewan a safer place to work and live.
Psychological Health and Safety Standard
Eldeen Pozniak and Annette Goski
WCB

Psychological health concerns have had a major impact on the safety, productivity and effectiveness of the workplace. WCB has made significant progress in addressing workplace factors that impact the physical health and safety of employees.

Now, WCB is giving attention to psychological health through hiring a psychological health and safety resource and providing workshops for employers.

Annette Goski has been with the Saskatchewan Workers’ Compensation Board since 2003, starting off as an Account Manager with the Board, and then moving into the position of Manager and currently as interim Director in the Regina office within the Prevention Department.

Annette’s previous work history was spent in private sector insurance. A lot of her knowledge in the insurance business was gained in her ten years working for Great West Life Insurance. A large part of Annette’s role is to work with industries and employers to eliminate injuries in their workplaces, as well as to form partnerships with like-minded organizations in the province in order to reach the goal of Mission: Zero. Worksafe Saskatchewan represents the partnership between the Prevention Department at the WCB and the Occupational Health and Safety Division at the Ministry of Labour Relations and Workplace Safety.

Work Time-Loss Management and Prevention
Crystal Willms, The Crystal Factor

Employees who are actively engaged, are inspired and passionate about their work. Approximately 50% of employees are unengaged and 17% are actively disengaged, contributing to additional reasons for absenteeism.

All employers have room for improvement when supporting their employees, managing employee absences and developing successful return to work strategies. When everyone understands wellness best practices, it can lead to a healthier, safer work environment and increased employee engagement.

This presentation will address what employees really think and feel when returning to work after a time-loss accident, illness or mental health leave. Reminders about valuable steps required to maintain or improve employee engagement as well as support individuals with return to work transition will be reviewed. All individuals will be inspired to evaluate their personal and professional wellness and take positive action.

Crystal Willms has been a life coach and return-to-work facilitator for nearly 20 years in both blue and white collar industries across the prairies. She supports individuals with mental wellness and injury management as well as personal and professional transitions. Crystal is also a consultant, assisting employers with a variety of needs such as workplace injury and disability management, return-to-work planning and employee terminations. She offers brain health and wellness education through presentations and group coaching.

Crystal is originally from Saskatchewan and has returned after 17 years of living out-of-province, primarily in Alberta. Her business is The Crystal Factor Human Services.

Guardian Angel Auto Flagger Manufacturing - Booth # 73
Kim Kreutzer
Box 1542, Watrous, SK  S0K 4T0
306-917-7764  guardianangelmfg@sasktel.net

My wife Donna and I were heartbroken when we heard about a young lady that was flagging during her first week of work and had been killed by a motorist. We also heard she was expecting and her and her partner moved to Saskatchewan, to start their new life. Then and there we decided to make it possible for a flag person to be out of the danger zone, but not take the job away from people that want to work. With this auto flagger we believe that we have done what we set out to do. The flag person now can operate the flagger in a safe way and operate the flagger from the seat of the vehicle with the seat belt on, (if regulations allow) or in the work zone and off the driving lane. The flag person no longer needs to confront upset motorists. In closing we strongly believe we have done what we wanted. No jobs are lost with a safe way to flag, protect the workers and the motoring public.
**Hazmasters** - *Booths # 67*
Kevin Cowley/Adam Leithoff
