

Safety Seminar

What's the DIG deal?

From installing fence posts and sprinklers to pipelines and fibre optic cables, everyone and anyone that is involved in excavation or digging needs to be aware of the risks that could be associated and the best practices for safe ground disturbance.

In this presentation we will tell you more about the Saskatchewan Common Ground Alliance (SCGA), review why safe digging practices are important, and provide you with a user-friendly reference guide that can assist you in completing your ground disturbance activities safely. The SCGA welcomes you to join in and learn more about the importance of safe digging and the Canadian Common Ground Alliance Underground Infrastructure Damage Prevention Best Practices Manual!
